THIS IS UNEVALUATED INFORMATION

25X1

1. The Berlin II Designs Bureau for Industrial Construction Work of the East German Ministry of Reconstruction has made designs for a ferro-chromium works to be erected at Katowice, Poland. The Designs Bureau promised to furnish the ordered designs by 20 March 1954 on condition that all basic material required for the work would be furnished by 31 January 1954.

2. It was originally planned to construct the ferro-chromium works in reinforced concrete and steel. However, due to the properties of the soil upon which the plant is to be erected, an all-steel structure had to be agreed upon. The works will be equipped with electric furnaces of two different types, i.e. one of them will have an output of 7,500 kVA, while five other electric furnaces will have an output of 3,000 kVA each.

3.
